APPLICATION AND USE

MVR actuators are designed for mounting on manifolds for floor, ceiling and wall radiant panels on heating or air conditioning plants.

OPERATION

MVR actuators are of electro-thermal type and are controlled by an on-off signal or, 24 Vac models only, also by pulse width modulation.

Actuators are powered by the control signal; this causes the heating of a thermostatic element. Consequently a small piston comes out and, opposing to return spring, lowers the valve stem.

MVR...M models are equipped with an auxiliary microswitch. The microswitch has the contact closed when the actuator is unpowered.

LVD 2006/95/CE according to the EN 61010-1 standard for the 110-230 V powered products.

MANUFACTURING CHARACTERISTICS

MVR are composed of UL94 V0 flammability thermoplastic material. All models are equipped with power supply cable.

Inside the actuator there is a thermostatic element heated by a PTC thermistor.

Actuators are equipped with a threaded M30x1.5 ring nut, located on the lower part, which allows an easy valve assembling. For coupling quota, see Dimensions (page 2).

All models are equipped with a stroke indicator having different colours (see table on page 2) to use according to the stem output.

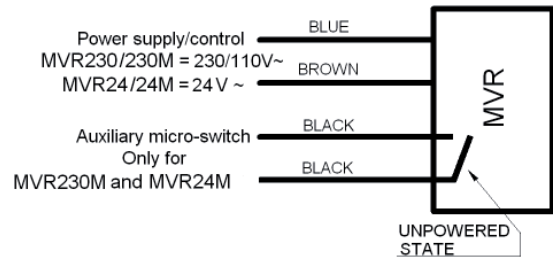

SAFETY PRESCRIPTIONS

230 V products

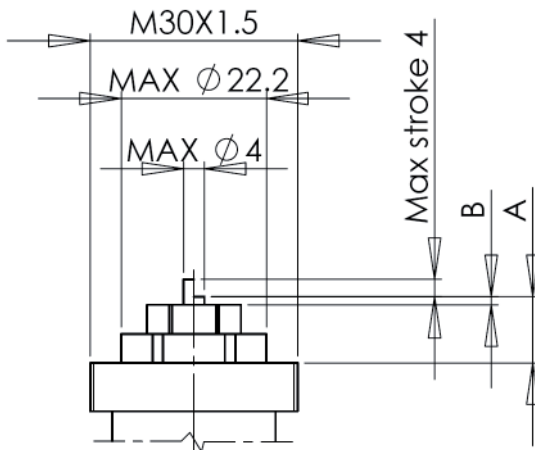

- 1) Install on the power supply line a protecting device to avoid short circuits (fuse or magneto-thermic) according to the specifications in force.
- 2) In case of accidental removal of the cover to make sure that power is disconnected before working on the actuator or near it.
- 3) The products are maintenance free.

INSTALLATION

- To lower the stem push the actuator on the collector
- Screw the ring nut onto the collector thread, placing the actuator as required.
- Connect the cable (see figure below) according to the controller wiring diagrams.
